

1)

Gendermag is a study that was created to find and fix what are called 'Gendermag bugs' in which there are certain situations where something is created according to the creator or developers own personal mind. According to certain personality types and learning styles, some may find the application created to be harder to use and harder to understand then others, while on the flipside some may find it incredibly intuitive and easy to use. This is specifically referring to the 'user interface' that the users will interact with. In this particular situation there are three main persona types, Abi, Pat, and Tim.

The Abi persona is an individual who has lower confidence and understanding when it comes to interacting with a created application, however the Abi persona tends to use technology the most when it comes to accomplishing tasks and getting things done. The Abi persona differs from the others because both Pat and Tim personas have 'higher' confidence and understanding when compared to Abi, such that they may have more experience or knowledge when it comes to computing or technology related tasks.
